## Tools and inserts for roll machining

# CERATIZIT – secrets of success

## Secrets of success

- CERATIZIT is your partner for exceptional hard material solutions. Hard materials and tools from CERATIZIT – our solutions to complex problems are an integral part of our customers' success. Our products guarantee: economy – long life – speed! And it is precisely this combination which gives our business partners a direct competitive advantage.
- Premier performance is only possible through a total appreciation of the requirements of our business partners. A performance achieved through flexible thinking and continuous dialogue with our customers. A pioneering spirit and a deep understanding of powder metallurgy characterize the history of CERATIZIT. One of the attributes of our company philosophy is the search for perfection: target oriented – sustainably – passionately!
- Intensive research and development activities, taking into account the precise requirements and working processes of the customer, are today's investment for the solutions of tomorrow – and beyond.

## Corporate values

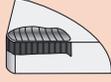

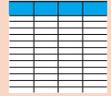

- 1 The views and focus of our business partners matter
- 2 Innovative and flexible thinking matters
- 3 Communication matters
- 4 Employee development matters
- 5 Professionalism matters
- 6 Our environment matters

## Tailored cutting tool solutions

- Cutting materials, coatings, inserts, tooling systems and machining solutions – all this is included in the cutting tool division at CERATIZIT.
- Worldwide well-known companies process advanced materials applying cutting tool products from CERATIZIT: from the automotive industry to the aerospace industry, mechanical engineering, tool construction to the oil industry.
- The basis of these long-term business relations is the faith of the customers in the extensive know-how of the carbide specialists.

## Strengths and services

- High competence in production for carbides and all other hard materials such as PCD, CBN, ceramic ...
- Market leader in coating technology (CVD PVD), innovative developments such as 'HYPERCOAT'
- Application advice, customized developments
- Production sites in all important industrialized regions

HYPERCOAT

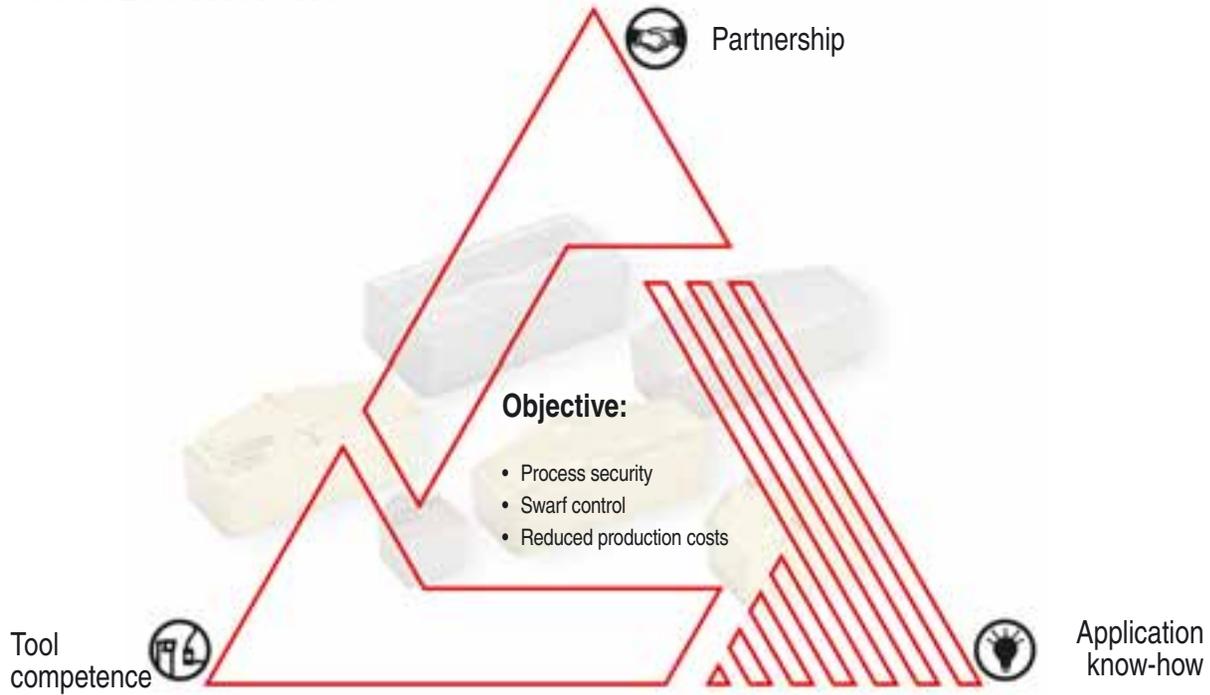

- Worldwide consulting of our customers supported by experienced application engineers on site
- Supporting machine manufacturers to achieve maximum performance
- Comprehensive standard programme
- Continuous development of cutting materials and geometries

## Designation system for parting and grooving inserts

## Designation system for turning inserts

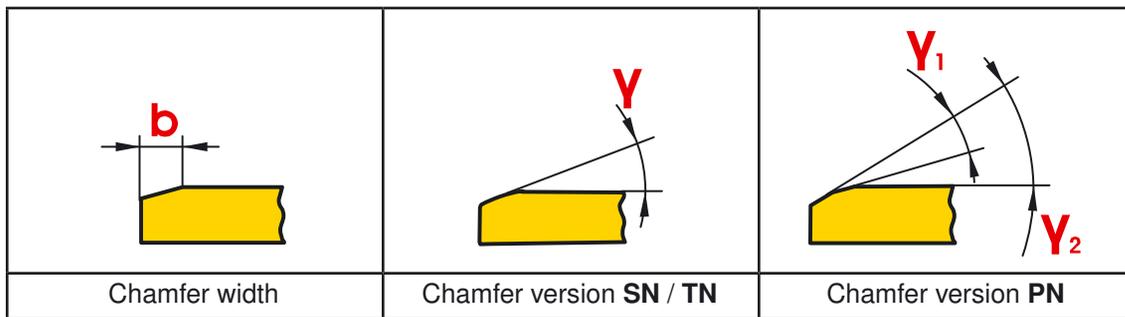

Our designations for turning inserts are according to the ISO designation system. **Position 10** is an additional information for our chamfer designation.

# CERATIZIT designation system

## CERATIZIT chamfer key

In inserts without chip groove both cutting edge type and correct chamfer version are decisive. For this reason the designation system has been extended by the following key for chamfers.

Designation according to ISO	CERATIZIT	Definition
<b>Cutting edge</b>	<b>Chamfer</b>	<b>Chamfer width (b) x angle (<math>\gamma</math>, <math>\gamma_1</math>, <math>\gamma_2</math>)</b>
<b>SN</b> (chamfered and honed)	050D	0,50 x 20°
<b>TN</b> (chamfered)	200D	2,00 x 20°
<b>PN</b> (double-chamfered and honed)	100CF	1,00 x 15° + 30° Chamfer width refers only to $\gamma_1$

Codes for angle  $\gamma$ :

A = 05°	D = 20°
B = 10°	E = 25°
C = 15°	F = 30°

Examples:

LNMN 6688SN-040D chamfer width: 0.40 mm, angle  $\gamma_1$ : 20°  
 LNMN 6688SN-100B chamfer width: 1.00 mm, angle  $\gamma_1$ : 10°  
 LNMN 6688PN-150CE chamfer width: 1.50 mm, angle  $\gamma_1$ : 15°, angle  $\gamma_2$ : 25°  
 HX 40.32.65PN-150CE chamfer width: 1.50 mm, angle  $\gamma_1$ : 15°, angle  $\gamma_2$ : 25°  
 HX 45.32.65PN-125CE chamfer width: 1.25 mm, angle  $\gamma_1$ : 15°, angle  $\gamma_2$ : 25°

## Designation system for tools

The designation system consists of 5 parts which describe the tool characteristics:

- 1) General information about type/version of the tool
- 2) Machine connection (in green)
- 3) Cartridge type (in blue)
- 4) Insert type (in yellow)
- 5) Additional information on depth of cut and approach angle

**Example:** designation system for tool holders with integral insert seat

This integral tool (no cartridge) designation doesn't need the part for the cartridge designation. See table below.

<p><b>General information</b></p> <table border="1" style="margin: 5px auto; text-align: center; border-collapse: collapse;"> <tr> <td style="padding: 2px;">H</td> <td style="padding: 2px;">D</td> <td style="padding: 2px;">H</td> <td style="padding: 2px;">T</td> <td style="padding: 2px;">R</td> </tr> <tr> <td style="padding: 2px;">(1)</td> <td style="padding: 2px;">(2)</td> <td style="padding: 2px;">(3)</td> <td style="padding: 2px;">(4)</td> <td></td> </tr> </table>	H	D	H	T	R	(1)	(2)	(3)	(4)		<p>(1) HD = heavy duty                  (2) H = tool holder / C = cartridge                  (3) T = turning / G = grooving                  (4) R = direction of cut</p>

# Clamping systems

## Clamping through pin (P)

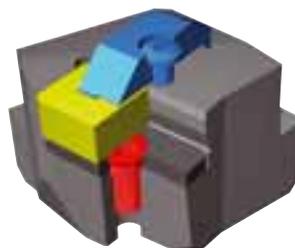

Inserts with a clamping hole are mounted applying the tried and tested pin clamping system. The insert is pulled onto the seating faces from below.

- Clamping element
- Insert
- Shim

## Top clamp (C)

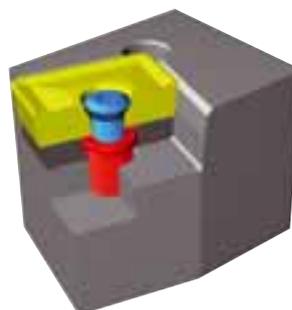

Plain inserts (no hole) are simply clamped from above.

- Clamping screw and claw
- Insert
- Shim
- Shim pin

## Clamping with a screw (S)

The form lock screw guarantees a safe connection of the insert and the tool holder. Chip evacuation is not hindered by obstructive clamping elements. Due to the neutral insert position the effective rake angle is identical to that of the insert form and geometry.

- Clamping screw
- Insert
- Shim
- Threaded shim screw

# OEM Services

Together we create real solutions

**CERATIZIT offers tailor-made complete solutions for optimum machining.**

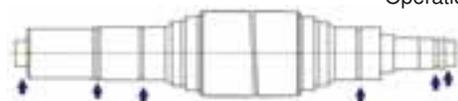

1. Specific team for **OEM services** to guarantee professional project processing
2. Close cooperation with machine manufacturers
3. Complete machining concepts and tooling solutions:
  - ▶ Workflow
  - ▶ Tools
  - ▶ Cutting parameters
  - ▶ Tools necessary for a specific application
  - ▶ Process times
  - ▶ Process costs
4. Support for acceptance and commissioning runs
5. Detailed project documentation
6. Worldwide distribution and service network to support process optimization

◆ When investing in machines, make use of CERATIZIT's **OEM Service** to ensure optimum productivity — from the first day onwards!!

# MaxiMill 260

## MaxiMill 260

- Universal application
- Adjustable wiper edges
- Long tool life

- 1 Peripheral milling
- 2 Face milling
- 3 Slot milling
- 4 Shoulder milling

Milling cutters Ø 80-400 mm

> 100 combinations

The CERATIZIT profitability calculation

Free download from [www.ceratizit.com](http://www.ceratizit.com)

The image displays four overlapping screenshots of the CERATIZIT CT-Wirt software interface. The windows are titled 'Variable costs 1', 'Variable costs 2', 'Results', and 'Cost saving'.

- Variable costs 1:** Shows 'Recommendation : Turning' and 'Current situation : Milling'. It includes a 'Main cutting time' field with values 318 and 500.
- Variable costs 2:** Shows 'Recommendation : ' and 'Current situation : '. It includes a 'Number of cutting edges' field with values 4 and 1.
- Results:** A detailed comparison table between 'Recommendation' and 'Current situation'.
- Cost saving:** Shows a 'Cost saving' of 361.28 [EUR] and 37.6 [%].

Recommendation :		Current situation :	
Machine costs per operation :			
530,00	[EUR]	833,33	[EUR]
Machine costs per operation and batch :			
530,00	[EUR]	833,33	[EUR]
Costs per cutting edge set :			
6,45	[EUR]	5,69	[EUR]
Cutting material costs per batch :			
45,10	[EUR]	79,68	[EUR]
Costs per cutting edge change :			
3,33	[EUR]	3,33	[EUR]
Costs of cutting edge change per batch :			
23,31	[EUR]	48,67	[EUR]

# Types of wear

Success stories

D2-D5

Types of wear

D6-D7

Trouble shooting

D8

General formula

D9

Hardness values

D10

Special tools

D11

## Flank wear

Abrasion on flank, normal wear after a certain machining time.

### Reasons:

- > Cutting speed too high
- > Carbide grade with insufficient wear resistance
- > Feed rate not adapted

### Remedies:

- > Reduce cutting speed
- > Select more wear resistant carbide grade
- > Adapt feed rate to cutting speed and cutting depth (increase feed rate)

## Edge chipping

Through excessive mechanical stress at the cutting edge fracture and chipping can occur.

### Reasons:

- > Grade with too high wear resistance
- > Vibration
- > Feed rate too high or excessive cutting depth
- > Interrupted cut
- > Swarf damage

### Remedies:

- > Use tougher grade
- > Use negative cutting edge geometry with chip groove
- > Increase stability (tool, work piece)

## Cratering

The hot chip which is being evacuated causes cratering at the rake face of the cutting edge.

### Reasons:

- > Too high cutting speed and / or feed rate
- > Rake angle too shallow
- > Grade with low wear resistance
- > Insufficient coolant supply

### Remedies:

- > Reduce cutting speed and / or feed rate
- > Increase coolant quantity and / or pressure, optimise coolant supply
- > Use grade which is more resistant to cratering

# Types of wear

## Plastic deformation

High machining temperature and simultaneous mechanical stress can lead to plastic deformation.

### Reasons:

- > Too high machining temperature, resulting in softening of substrate
- > Damaged coatings

### Remedies:

- > Reduce cutting speed
- > Choose carbide grade with higher wear resistance
- > Provide cooling

## Built-up edge

Built-up material / edge occur when the chip is not evacuated properly due to insufficient cutting temperature.

### Reasons:

- > Too low cutting speed
- > Too small rake angle
- > Wrong cutting material
- > Lack of cooling / lubrication

### Remedies:

- > Increase cutting speed
- > Enlarge rake angle
- > Apply TiN-coating
- > Use emulsion with higher concentration

## Insert breakage

Excessive stress of the insert causes breakage.

### Reasons:

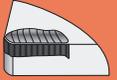

- > Excessive stress of cutting material
- > Lack of stability
- > Corner angle too small
- > Excessive notching

### Remedies:

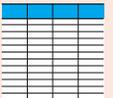

- > Use tougher cutting material
- > Use protective edge chamfer
- > Increase honing of edge
- > Use more stable geometry

# General formula

## Turning, milling

Cutting speed [m/min]

$$v_c = \frac{d \cdot \pi \cdot n}{1000}$$

Revolution number [1/min]

$$n = \frac{v_c \cdot 1000}{\pi \cdot d}$$

## Specific formulas for turning

Feed rate [mm/rev]

$$f = \frac{V_f}{n}$$

Chip cross section [mm<sup>2</sup>]

$$A = a_p \cdot f$$

## Specific formulas for milling

Feed rate [mm/min]

$$v_f = f \cdot n = f_z \cdot z \cdot n \quad [\text{mm/min}]$$

Metal removal rate [mm<sup>3</sup>/min]

$$Q = a_p \cdot a_e \cdot v_f \quad [\text{mm}^3/\text{min}]$$

### Legend:

$v_c$  cutting speed [m/min]  
 $d$  roll diameter [mm]  
 $n$  revolution number [1/min]  
 $\pi$  3.141592  
 $f$  feed rate [mm/rev]  
 $V_f$  feed rate [mm/min]

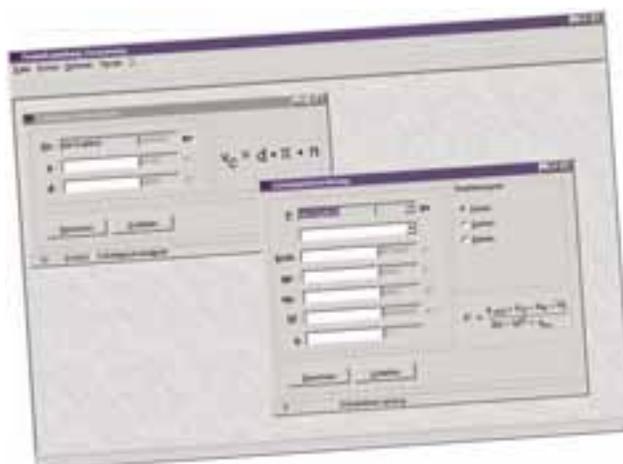

$A$  chip cross section [mm<sup>2</sup>]  
 $a_p$  depth of cut [mm]  
 $z$  number of teeth  
 $f_z$  feed rate/tooth [mm]  
 $Q$  metal removal rate [mm<sup>3</sup>/min]  
 $a_e$  width of cut [mm]
